

# Resources, Availability, and Scarcity

# Resources

are things we use

# Availability

is when there is a large supply of a good or service

# Scarcity

is when there is a limited supply of a good or service

# Availability

*Plenty* for everyone!

# Scarcity

*Not enough* for everyone!

**Producers make income with the resources they are able to sell.**

**Availability of resources = INCOME**

6 bananas that cost .50 cents each = **\$3.00**

**Scarcity of resources = LESS INCOME**

1 banana that costs .50 cents = **\$.50**

**When resources are *scarce*, producers make *less* income and are *unable to buy the things their families need.***

**What can a producer, who has fewer resources, do so he can make enough income for his family?**

**Sell the few resources he has for *MORE* money!**

**Available**

or

**Scarce**

**YOU Decide!**

# Available

or

# Scarce

**YOU Decide!**
